## Asses your metabolism with comprehensive testing:

- Full thyroid assessment:** TSH, free T3, free T4, and thyroid antibodies
- Stress hormones:** morning cortisol and sometimes afternoon cortisol
- Liver panel:** liver enzymes to assess for fatty liver
- Inflammatory markers:** inflammation can decrease your metabolism CRP, ESR and ferritin
- Energy vitamins:** B12 and vitamin D
- Lipids:** cholesterol and triglycerides
- Insulin resistance:** the two-hour insulin challenge test with glucose
- Female hormone imbalance:** estrogen and progesterone
- Other hormones or markers may be tested as needed.

★ IV therapy is a nice add-on to any visit, and can fast track your progress.

★ Requisition for the local hospital lab provided
